AUTOMATE • ENGAGE • GROW

HOSPITALITY / CUSTOM SOFTWARE & AUTOMATION

Custom solutions for connected hotel operations.

Guest experience. Team coordination. Revenue workflows. Management visibility.

A practical catalogue for hotel owners, general managers and operational leaders to identify the solutions their property or group actually needs.

22 solution areas • Modular delivery • Needs selection workbook

CAPABILITY & NEEDS GUIDE | OCTOBER 2026

onetechautomation.com

THE APPROACH

Built around the way your hotel works.

O.N.E.Tech designs custom software, AI assistance and workflow automation around your operational priorities, teams and existing technology.

Choose a specific problem or a connected programme

Start with one workflow, connect several departments, or establish a shared operating layer across multiple properties. Each engagement has its own agreed scope.

Connect the systems you already use

Potential connections include your property management system (PMS), booking engine, point of sale (POS), CRM, accounting tools and communication channels. Access and compatibility are checked before scope is committed.

Use AI where it helps the work

AI can assist with enquiries, translation, document extraction, knowledge search and summaries. Business rules manage task routing and approvals, with staff review where judgement or authorisation is required.

How to use this guide

1. Review the catalogue on pages 3-8 and identify relevant workflows.
2. Mark your priorities on page 10.
3. Complete the short brief on page 11 and return the PDF for discussion.

This is a menu of potential custom solutions, not a ready-made product specification or a commitment to deliver every feature. Final feasibility, deliverables, timing and pricing follow discovery and technical review.

SOLUTION CATALOGUE

Guest journey & service

Select individual workflows or combine related areas into a phased implementation.

01 Reservations & direct booking enquiries

Enquiries need faster responses and consistent follow-up.

Unified enquiry inbox; multilingual response assistance; enquiry qualification; availability and rate lookup; quotation preparation; follow-up reminders; abandoned-booking recovery where contact details and permissions are available.

Measure: First-response time; enquiry-to-booking conversion.

Scope note: Live rates and booking changes require authorised booking-system access.

02 Pre-arrival & reception

Arrival information is scattered and reception repeats manual work.

Welcome messages; arrival-time collection; secure preregistration; special, dietary and accessibility requests; transfer coordination; check-in queue management; room-assignment assistance; late-arrival handling; shift handovers.

Measure: Pre-arrival completion; check-in handling time.

Scope note: Identity checks, room allocation and digital keys depend on approved systems and procedures.

03 Digital concierge & guest portal

Guests need quick answers and an easy route to hotel services.

QR-access guest portal; multilingual hotel FAQs; approved local information; itinerary assistance; restaurant and activity enquiries; transport requests; voice assistance; staff escalation; service status visibility.

Measure: Answer resolution; escalation rate; guest satisfaction.

Scope note: Answers use approved content; live availability and confirmations come from connected systems.

04 Guest requests & service recovery

Requests move between departments without clear ownership.

Capture requests from approved channels; assign department and owner; apply priority and response targets; escalate delays; send status updates; confirm completion; record complaints; route compensation approvals.

Measure: Resolution time; overdue requests; repeat complaints.

Scope note: Hotel-defined escalation rules and authorised staff control service recovery decisions.

Measures are agreed for the selected scope and compared with a baseline; they are not promised results.

SOLUTION CATALOGUE

Property operations

Select individual workflows or combine related areas into a phased implementation.

05 Housekeeping & room readiness

Reception and housekeeping need a shared view of rooms and tasks.

Cleaning schedules; attendant assignments; arrival-priority cleaning; room-status updates; checklists; supervisor inspections; do-not-disturb handling; linen requests; deep-cleaning plans; minibar replenishment; lost and found.

Measure: Time to ready; inspection pass rate; overdue cleaning.

Scope note: Room-status ownership and synchronisation rules are agreed with the PMS and operating teams.

06 Maintenance & engineering

Faults, repairs and scheduled servicing are difficult to track.

Photo-based fault reports; work orders; technician assignment; emergency escalation; preventive schedules; service histories; spare-parts requests; contractor coordination; repeat-fault analysis; out-of-service room tracking.

Measure: Repair time; repeat faults; unavailable room-hours.

Scope note: Urgency and safety decisions follow the hotel's approved escalation procedures.

07 Food, beverage & room service

Orders, reservations and guest charges cross several teams.

Restaurant reservations; digital menus; room-service orders; kitchen routing; delivery tracking; dietary-request flags; breakfast planning; table waitlists; minibar capture; charge posting; food-waste records.

Measure: Order-to-delivery time; order errors; recorded waste.

Scope note: Menus, allergen information, kitchen capacity and charges require designated data owners.

08 Spa, wellness & leisure

Service bookings and staff or facility availability need coordination.

Treatment bookings; therapist schedules; reminders; cancellation waitlists; class reservations; sports-facility bookings; cabana reservations; equipment rental; wellness packages; feedback collection.

Measure: Utilisation; no-show rate; booking completion.

Scope note: Booking rules account for staff, facilities, capacity and cancellation policies.

Measures are agreed for the selected scope and compared with a baseline; they are not promised results.

SOLUTION CATALOGUE

Revenue & relationships

Select individual workflows or combine related areas into a phased implementation.

09 Upselling & ancillary revenue

Relevant extras are offered inconsistently across the guest journey.

Room upgrades; breakfast packages; late checkout; transfers; celebration packages; spa offers; excursions; extended stays; staff offer prompts; approved guest segmentation; offer conversion and revenue tracking.

Measure: Offer conversion; ancillary revenue per stay.

Scope note: Offers respect availability, approved prices, communication preferences and permissions.

10 Corporate sales & travel trade

Sales opportunities and account follow-ups are spread across tools.

Sales CRM; corporate enquiry qualification; account assignment; rate approvals; proposal generation; contract reminders; travel-agent enquiries; partner records; follow-up queues; account performance views.

Measure: Lead response; proposal conversion; renewal coverage.

Scope note: Rate commitments and contractual terms remain subject to authorised approval.

11 Groups, weddings & events

Complex enquiries require coordination from quote to delivery.

Venue and room availability checks; package quotations; site visits; proposal approvals; contract and deposit tracking; rooming lists; banquet event orders; supplier coordination; event plans; post-event follow-up.

Measure: Quote turnaround; enquiry conversion; overdue event tasks.

Scope note: Room blocks, capacity and deposits must reconcile with the relevant source systems.

12 Marketing, loyalty & guest retention

Guest communication needs relevance and a consistent follow-up process.

Guest segmentation; preference management; repeat-stay invitations; seasonal campaigns; loyalty workflows; referral programmes; birthday and anniversary offers; reactivation; campaign attribution; direct-booking promotions.

Measure: Repeat bookings; campaign conversion; opt-out rate.

Scope note: Use authorised guest data and channel-specific marketing permissions.

Measures are agreed for the selected scope and compared with a baseline; they are not promised results.

SOLUTION CATALOGUE

People & business administration

Select individual workflows or combine related areas into a phased implementation.

13 Feedback, reputation & quality

Feedback is collected but recurring issues do not always lead to action.

In-stay satisfaction checks; surveys; consistent review invitations; review-response drafts; sentiment and topic analysis; quality audits; recurring-issue reports; corrective actions; management escalation.

Measure: Feedback response; corrective-action closure; recurring issues.

Scope note: Public responses can require approval; review invitations follow platform rules.

14 Staff, shifts & internal knowledge

Shift changes, training and operational knowledge depend on manual coordination.

Shift planning; availability collection; swap requests; attendance integration; onboarding; training reminders; multilingual SOP assistant; announcements; handovers; staff accommodation requests; document expiry reminders.

Measure: Handover completion; training completion; scheduling effort.

Scope note: Access to employee records and workforce decisions follows hotel policies.

15 Purchasing, suppliers & inventory

Teams lack visibility of stock, requests and supplier commitments.

Stock records; reorder alerts; purchase requests; approvals; supplier quote comparison; purchase orders; delivery checks; supplier performance; linen and amenity inventory; interdepartmental transfers; waste alerts.

Measure: Stock-outs; purchase cycle time; inventory discrepancies.

Scope note: Stock baselines, approval limits and receiving responsibilities are established first.

16 Finance & administrative workflows

Invoice, payment and reconciliation tasks create repeated manual work.

Invoice extraction; review and approval; purchase-order matching; expense processing; deposit tracking; reminders; refund approvals; reconciliation assistance; revenue exceptions; receivables tracking; report preparation.

Measure: Invoice cycle time; unresolved exceptions; overdue balances.

Scope note: Posting, refunds and accounting treatments use approved controls and accounting-system access.

Measures are agreed for the selected scope and compared with a baseline; they are not promised results.

SOLUTION CATALOGUE

Oversight & resource management

Select individual workflows or combine related areas into a phased implementation.

17 Safety, security & compliance records

Inspection evidence, incidents and corrective actions are difficult to consolidate.

Incident reports; emergency checklists; inspection schedules; visitor and contractor logs; access requests; fire, food and pool inspection records; certificate reminders; audit trails; privacy-request routing; retention workflows.

Measure: Overdue inspections; open incidents; corrective-action closure.

Scope note: Supports accountable hotel teams; does not replace professional review or statutory responsibilities.

18 Energy, utilities & sustainability

Consumption and waste need clearer visibility and timely intervention.

Electricity and water dashboards; unusual-consumption alerts; sensor-based leak detection; occupancy-linked HVAC integration; equipment runtime tracking; waste records; linen-reuse reporting; utility cost comparisons.

Measure: Consumption per occupied room; alert response; recorded waste.

Scope note: Meter, sensor and building-system access is assessed; control changes require engineering approval.

19 Transport, luggage & logistics

Arrivals, drivers, luggage and deliveries need a coordinated schedule.

Airport transfers; driver assignment; shuttle reservations; arrival/departure coordination; vehicle service reminders; luggage collection and storage records; valet requests; supplier delivery slots; excursion transport.

Measure: On-time pickups; missed requests; task completion.

Scope note: External operators and available transport data are included in the agreed scope.

Measures are agreed for the selected scope and compared with a baseline; they are not promised results.

SOLUTION CATALOGUE

Intelligence & connected systems

Select individual workflows or combine related areas into a phased implementation.

20 Revenue planning & commercial insight

Commercial teams need a consolidated view of demand and performance.

Occupancy, ADR and RevPAR dashboards; booking pace; pickup analysis; cancellation trends; channel mix; acquisition cost views; demand forecasting; pricing recommendations; budget scenarios; revenue exception alerts.

Measure: Forecast error; channel contribution; reporting effort.

Scope note: Forecasts depend on data quality; pricing recommendations retain approval and are not guaranteed outcomes.

21 Management & multi-property oversight

Managers need clear operational visibility across teams and locations.

Daily briefings; unresolved-issue dashboards; department performance; property comparisons; regional escalations; shared standards; central procurement visibility; management action tracking; owner reporting.

Measure: Overdue tasks; action closure; report preparation time.

Scope note: Metric definitions, property permissions and reporting frequency are agreed across the group.

22 Integrations, applications & data foundations

Systems and records are fragmented or the hotel needs a tailored interface.

PMS, POS, CRM and accounting connections; booking-engine integrations; guest record matching; duplicate review; secure synchronisation; staff mobile apps; guest web apps; owner and supplier portals; migration; role-based dashboards.

Measure: Sync failures; duplicate records; manual data entry.

Scope note: Vendor access, API limits, licences and data ownership determine integration scope.

Measures are agreed for the selected scope and compared with a baseline; they are not promised results.

DELIVERY & OPERATING CONTROLS

From selected needs to a working solution.

A clear sequence keeps scope, responsibilities and acceptance criteria visible throughout delivery.

01 Assess

Map the current workflow, volumes, delays and systems. Agree the business owner and baseline measures.

02 Architect

Define user journeys, integrations, data requirements, exceptions and a practical first release.

03 Govern

Agree roles, approvals, access, retention, audit records, human escalation and operating responsibilities.

04 Deploy

Build and integrate; test with representative scenarios; complete user acceptance; train users and launch.

05 Optimise

Review adoption and agreed measures, resolve issues and prioritise subsequent improvements.

What the scoped proposal will define

Deliverables and exclusions; integration dependencies; hotel and supplier responsibilities; acceptance criteria; rollout plan; ownership and handover; support arrangements; implementation and recurring costs.

Third-party licences, messaging, AI usage, payment services, hardware and vendor integration fees are identified separately where applicable. Timing and investment are confirmed after the selected requirements and access have been reviewed.

NEEDS SELECTION / 1 OF 2

Select the areas worth discussing.

For each area, choose a priority. Leave unreviewed areas blank. Complete digitally in a PDF reader that supports forms, or print and mark by hand.

NEEDS SELECTION / 2 OF 2

Tell us what matters in your operation.

Return this completed guide to your O.N.E.Tech contact. We will use it to focus the discussion and define the next step.

Hotel / group name

Contact name, role and email

Properties, room count, locations and operating model

Current systems: PMS, booking engine, POS, CRM and other tools

What is the main problem? Include examples, volumes or delays.

What would success look like, and who would own the workflow?

Preferred timing, budget range (optional) and key constraints

Preferred starting point

- ○ Operational assessment
- ○ Focused workflow
- ○ Broader programme

Please use business-level descriptions; guest records or sensitive documents are not needed at this stage.
